Arsenii Polenok

Data Solutions Engineer

Technical Data & ML specialist with 4+ years of experience designing and delivering end-to-end data solutions. Experienced in working with complex data systems, building scalable ETL pipelines, and applying machine learning to real-world problems.

Strong communicator with experience collaborating across teams and translating business needs into technical solutions.

With my background in dynamic, remote start-up environments, I'm used to taking responsibility for the final result and know how to strike the right balance between perfection and shipping quickly to deliver impactful solutions in a prompt manner.

WORK EXPERIENCE

Yandex Cloud

2025 – Present

Data Engineer

Achievements to date:

- Set up **multi-stage data delivery pipelines** to the DWH for 8+ domains, processing **terabyte-scale** data in alignment with business requirements and system constraints;
- Executed a **large-scale migration** of a core CDM (100+ dependent processes) to improve system performance and optimize data workflows;

Core responsibilities:

- Designing and maintaining **Data Quality** monitoring and validation systems, improving data accuracy and reliability across data pipelines;
- Continuously work on **resource utilization optimization** by decommissioning outdated processes and improving performance of existing workflows;
- End-to-end **incident management** and solution performance monitoring, including detection, logging, root cause analysis, and resolution;

Extra Duties:

- Collaboration with engineering teams to track and resolve technical issues;
- Access management and PR reviews, ensuring security, code quality, and compliance.

Latoken (top-30 crypto exchange)

2023 – 2025

Data Solutions Engineer

Achievements / Responsibilities:

- Designed and implemented an **ML-based tool**, leveraging blockchain activity and trending metrics to discover new tokens with high potential of becoming popular, streamlining the listing process. Tokens listed based on the model's recommendations achieved a **450% growth**;
- Developed and maintained **data ingestion pipelines**, including **API integrations** with blockchain data providers to collect on-chain data for **17k+ tokens** across 30+ networks. Combined it with off-chain data and integrated it into data warehouse, achieving **over 3x** token data **coverage**;
- Redesigned the **DWH architecture** in **collaboration with 5 cross-functional teams** to support new tokens addition logic, improving scalability and reducing query processing times;
- Maintained and optimized **Airflow ETL pipelines**, ensuring seamless **daily ingestion of 1TB+ data** from production databases into the analytical DWH;
- Calculated detailed trade-based Trading Desk PnL using 3TB+ of trades data using partitioned computing, enhancing trading strategy insights and reducing potential risks;
- Created 10+ automated Power BI dashboards (e.g., Exchange Rating fluctuations monitoring panel, Collected Fees reconciliation) providing actionable insights for key stakeholders;
- Reported directly to the CEO and represented the Data Unit in cross-functional discussions and company-wide initiatives.

CloudReports (analytical platform)

2021 – 2023

Backend Developer

Achievements / Responsibilities:

- Developed **ETL/ELT** connectors for **15+ cloud services** (ERP, CRM, Marketplaces) and analytical DWH (BigQuery, ClickHouse)
- Created SQL views for system entities to prepare data for user analytics integration
- Single-handedly supported **420+** working **integrations**
- Developed a **Python package** that **accelerated** the release of new integrations **by 300%**
- Optimized data export logic, achieving more than **5x** Google Cloud **resources cost reduction**
- Engaged with clients and data providers to analyze requirements and design optimal data delivery and integration solutions.

SKILLS

Areas of Expertise

- **Data Ingestion**: API integration, web-crawling, pipeline design;
- **Data Engineering**: ELT/ETL, DWH design, large-scale data processing, streaming, workflow orchestration;
- **Machine Learning**: feature engineering, predictive analytics, modeling / deployment / evaluation;
- **Data Analytics:** statistics, modeling, hypothesis tests, experiments

Programming Languages

Python (advanced), SQL (advanced), C# (intermediate), R, Go, Rust, PHP

Databases

Google BigQuery, PostgreSQL, ClickHouse MS SQL, MySQL, Redis, Firebase, YTSaurus

Frameworks and Toolkits

Pandas, NumPy, Scikit-learn, Flask, Web3, PyTorch, TensorFlow, Keras, BeautifulSoup, DASK, Prefect, NetworkX, XGBoost, .NET, React

Tools and Utilities

Apache Airflow, Workflows, Nirvana, Google Tasks, Git, Selenium, Jupyter

Platforms and Environments

Google Cloud Platform, Linux (Ubuntu), Docker, Kubernetes

Technologies and Concepts

Big Data, REST, GraphQL, gRPC, Data Quality, CI/CD, Distributed Systems, Version control

Besides, I'm ...

proficient in English (C1 Advanced)

always learning | a critical thinker

EDUCATION

Financial University (BS)

Applied Maths and Computer Science

Data Analysis and Decision Making in Economics and Finance

Moscow *2018 – 2022*
